SyncITBaby™

ONE CLICK MOBILITY

Providing computer users synchronization, mobility, encryption and authentication.

Fire and forget features which include sync, resync and guest modes.

Use guest mode on a computer without leaving a trace behind.

Scenario One

Today's World:

Musicians compose and records songs to sell globally using the most cost effective channels. They desire to sell their music using the Internet, where the listener could download the record for a small fee. He is aware of music piracy, but lacks a real solution to prevent illegal downloads.

Scenario Two

Today's World:

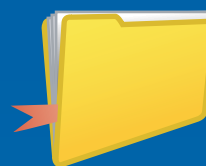

A road warrior is on the road five days a week visiting domestic and international clients. The individual readily needs access to their most up-to-date documents, e-mail, data, and files. The individual is unable to access real-time information due to lack of synchronization. His productivity is impacted adversely due to the lack of personal settings and personal computer persona while using a clients computer.

Scenario Three

Today's World:

A family purchases a new computer. They are frustrated with having to reconfigure their personal environment from scratch. Their personalized desktop layout, application toolbars, Internet settings, e-mail settings, and more have all been reset. It will now take the family many hours to attempt to reconfigure their new environment.

SyncITBaby's World

The individuals in the above sample scenarios would have benefited from the use of SyncITBaby. The application allows multimedia downloads using the highest level of authentication. Synchronization of user personas, files, and data in a real-time environment. It also allows a user the ability to temporarily or permanently ReSync onto another computer personal files, folders, e-mail, address book, favorites, MP3s, videos, personal settings and more. A user's data is always safe and secure with SyncITBaby's encryption technology preventing any unauthorized access.
