

Gaviri Unveils PocketSearch, The First Portable Search Engine

For Immediate Release

PARSIPPANY, N.J./EWorldWire/April 11, 2005 --- The true potential of portable data has been unleashed. Gaviri PocketSearch(TM) has been released. Gaviri PocketSearch(TM) is a powerful search engine that runs on portable drives. It is the first portable search engine available and is the perfect portable drive companion.

Gaviri PocketSearch(TM) was conceived in response to problems of finding and managing personal and business information on portable drives. Portable drives allow users to carry massive amounts of information anywhere they go. Before the release of PocketSearch, the portable search engine needed to unlock the true value of portable data was missing.

"Gaviri PocketSearch(TM) gives users the ability to take their search engines with them, just as they do their data," said Yuriy Soroka, the chief programmer of PocketSearch.

The unique pocket search engine provides benefits to users at work, on the road, in the office or at home.

The increasing capacity, speed and convenience of portable drives, has allowed users to utilize portable drives to build digital libraries, create data backups and permanent storage. Gaviri designed PocketSearch to accommodate these uses, by running on drives ranging in capacity from a few megabytes to hundreds of gigabytes. These features allow users to quickly retrieve data from personal digital libraries, backups or stored digital collections.

Gaviri PocketSearch(TM) indexes text, HTML, music, video as well as most of the office suites such as Microsoft office, StarOffice, OpenOffice, KOffice, PDFs and a variety of other file formats. Gaviri PocketSearch(TM) categorizes data into easily understandable views. This makes it easy to understand the content of the drive and use categories to get relevant results. Users can easily zero in on what they want with one click.

Gaviri PocketSearch(TM) revolutionizes search technology by making it portable. Users can now take search engines along with their data and be able to find information quickly and easily from anywhere.

About Gaviri

Gaviri Technologies (www.gaviri.com), a Parsippany, N.J.-based company, provides desktop, portable and embedded search solutions to home, small business and enterprise customers. Gaviri Technologies is revolutionizing searching by making it portable. Portable search technology makes it possible for search engines to work the way people work, where they work and with the devices they use.
