Temple University Selects IQinVision's IQeye Megapixel Network Cameras

IQeye Resolution(TM) offers better coverage and detail than legacy analog cameras.

For Immediate Release

SAN CLEMENTE, Calif./EWORLDWIRE/April 5, 2006 --- IQinVision, market leader in high performance megapixel network cameras, smart IP cameras and network video recording systems, today announced that Temple University has deployed its IQeye megapixel IP cameras to replace a number of legacy analog cameras.

Temple University occupies 114 acres in Philadelphia and has over 34,000 students and 5,500 staff in 150 plus buildings facilities. When incidents occurred on campus, the CCTV system was often unable to provide the necessary resolution to identify suspects conclusively. According to Joe Leotti, Temple's superintendent of building systems, "We needed better image quality, video that would provide indisputable evidence and a technology that would allow for campus-wide expansion and integration." Temple turned to the IQeye. The uniquely powerful IQeye Resolution(TM) enables to cover significantly wider areas and still capture an impressive level of detail.

For recording the IQeye cameras, Temple chose Milestone Systems from Denmark, a leading manufacturer of Network Video Recording (NVR) Software, which enabled Temple to utilize the existing network infrastructure and upgrade the VCR and DVR technology to true digital recording.

Temple security staff immediately recognized the advantages of the IQeye Resolution(TM) and asked the university to expand the initial number of IQeye cameras from 15 to 50. To date, the new megapixel cameras have proven successful in positively identifying perpetrators such that the university is considering replacing more of the analog cameras with the IQeye Resolution(TM) cameras.

"Other companies may be able to build a megapixel camera but only IQeye cameras offer IQeye Resolution(TM), outstanding picture quality in changing and low-light conditions," said Paul Bodell, IQinVision vice president of sales and marketing. "Ensuring the safety of students and staff is one of the Temple's highest priorities. They chose a product they had confidence would operate reliably 24 hours a day on their network to help ensure they achieve its campus safety goals."

About IQinVision

IQinVision designs, manufactures and markets high performance, multi-megapixel IP cameras, intelligent video processing platforms and network-video-recording systems. Established in 1998, IQinVision has helped shape the surveillance and industrial video markets as the first to introduce HDTV resolution network security cameras, multi-megapixel IP video systems and multi-user digital pan/tilt/zoom. IQeye network cameras offer superior image quality with high speed, low light and intelligent video options and are used in a wide variety of government and commercial applications. The IQeye can run in stand-alone mode or can be integrated with other systems via its complete software developer's kit and API.

IQinVision is privately held and headquartered in California with regional offices in Pennsylvania and Utrecht, Netherlands. The company's products are available as IQeye-branded, private-labeled and custom OEM models. IQinVision's management is committed to exceeding the expectations of its partners and customers.
