Websyidian WebClient for CA Plex Developed with ADC Austin Released to the Public

For Immediate Release

AUSTIN, Texas/EWORLDWIRE/Feb. 13, 2008 --- The Websyidian WebClient developed for CA Plex in a partnership between ADC Austin and Websyidian A/S is now available to all customers. The WebClient was available to partners since September, 2007.

Web Enablement Today - SOA Tomorrow

This new tool enables CA Plex development shops to generate rich HTML directly from existing CA Plex model panels. The WebClient tool can be used both to publish existing applications to the Web and to develop new applications. WebClient generated applications deploy to standard J2EE Web server environments like Tomcat or IBM Websphere, and they are compatible with all CA Plex server technologies including C#/.NET, Java, RPG, SQL Server, and Oracle. The Websyidian WebClient also supports CA 2E applications that have been migrated to CA Plex via the ADC Modernization Studio.

The product comes with a set of advanced patterns to perform sophisticated HTML templating, enabling the development of Rich Internet Applications (RIA) that integrate seamlessly with Web services and features like geo-mapping, workflow, Ajax, and RIA JavaScript frameworks.

This means that the Websyidian WebClient handles today's Web enablement requirements as well as prepares CA Plex and CA 2E applications for future challenges like SOA, SaaS, and a sophisticated Web page design/rich application user experience.

The WebClient has been in a pilot phase/testing with selected technology partners. Partner developer Joe Aubuchon, principal and chief technology officer for ISV Patient Focus Systems, is more than satisfied with the WebClient: "WebClient is enabling us to publish our flagship client-server application to the Web, quickly certainly, but more importantly, with a high quality user interface." Javier Ruiz Alcoy, Plex architect for Dominion t.i. Madrid Spain, says, "WebClient has allowed us to keep up with the market's evolutionary needs of bringing 2E and Plex applications to a Web environment. This agile and effective tool has an outstanding level of performance, and the patterns included provide clear solutions to our imminent challenges."

The product is generally available through Websyidian, ADC Austin and a network of Websyidian and CA partners worldwide.

ADC Austin was established in 1996, and today the Austin based company employs a team of professionals across the U.S. ADC Austin has been working with solution development and modernization within 2E and Plex for many years - from the days of Synon and AS400 until today's CA 2E and Plex, Microsoft .NET, and IBM System i /Rational/Websphere. Clients include medium to large development shops across all industries.

Websyidian has provided Web development tools to the CA Plex and IBM System i market for 10 years, and it has been in the solution market for more than 20 years. Websyidian products are developed on this experience, best practices and user feedback. Today more than 200 companies in 35 countries worldwide use Websyidian Web application tools.

Both companies are CA Smart certified and IBM business partners.

Websyidian products hold the following IBM certificates: IBM ServerProven, Built on IBM Express Portfolio, IBM Galaxy Program, System i5 Security & Compliance Proven
