

## HoneyPoint Security Server from MicroSolved creates Proactive Protection

*This latest release of its best-of-breed corporate honeypot product expands its capabilities to include new types of bleeding-edge protection in the form of HornetPoints (that use "defensive fuzzing") and HoneyPoint Trojans.*

For Immediate Release

COLUMBUS, Ohio/EWORLDWIRE/May 19, 2008 --- MicroSolved Inc. announces the general availability of HoneyPoint™ Security Server version 2.50, the latest release of its best-of-breed corporate honeypot product which expands its capabilities to include new types of bleeding-edge protection in the form of HornetPoints and HoneyPoint Trojans.

HornetPoints introduce a pioneering and patent-pending approach called, "defensive fuzzing," that identifies and stops attacker activity in its earliest stage of reconnaissance - in some cases, literally eliminating bot-net and zero-day attacks before they have a chance to begin and propagate.

HoneyPoint Trojans, modeled after the counter-intelligence efforts of nation states, enables organizations to create pockets of "dis-information" that, once touched, create a forensic tracking capability that follows its movement inside the network or out. Imagine the ability to literally turn the tables on attackers to follow how this data is spread and used as it moves around the world.

"The addition of HornetPoints to the product really takes things to a new level. For the first time, organizations can proactively create protection that is robust, effective and capable of automatically defending them against many forms of attack," declared Brent Huston, CEO of MicroSolved. "Add the HoneyPoint Trojans to that mix, and you finally have organizations that are capable of removing the layers of confidentiality, integrity and availability from attackers. Used properly and creatively, the product lends itself well to the creation of a corporate counter intelligence program."

"Any organization that wants to improve their traditional security approach from a defense-only posture to a new and proactive mode of protection simply must have a look at HoneyPoint. I don't care how many layers of defense you have - it's time to play some offense," said Allan Bergen, business development director of MicroSolved.

For details on obtaining the 2.50 upgrades and/or to discuss the product or its new features, contact a MicroSolved account executive. For more information, visit '<http://www.microsolved.com/honeypoint>'.

About MicroSolved Inc.

MicroSolved Inc. was founded in 1992, making it one of the most experienced information security services companies in the world. Providing risk assessment, ethical hacking, penetration testing and security intelligence to organizations of all sizes has been management's passion for more than a decade.
