

## Infection Control Web Site Propels Armor Healthcare Into Hygiene Market

*Three Cs for Educators: Schools get Armor to Combat Children's Germs and Bacteria.*

For Immediate Release

HUDSON, Wis./EWORLDWIRE/Aug. 18, 2008 --- Armor Healthcare is forging ahead with beta-launch of the Armor Healthcare Web site ('<http://www.armorhealthcare.com>') into the educational/school market to deliver the products and services needed to block the spread of potentially fatal diseases in schools - where kids are supposed to be safe.

When the doors at schools open across the U.S. in a few short weeks, Armor Healthcare CEO Bob Simmons will be edging closer to his goal of delivering a comprehensive, turnkey hygiene program to educational environments nationwide - a fully functional system for hygiene with an extensive training component.

Simmons' personal five reasons for concern - his five kids - echo that of other parents, whose heightened concern about kids' treatment in medical care environments and about exposure to drug-resistant bacteria in the schools leads them to support implementation of comprehensive hygienic systems.

The 20-year medical supply and related industries' professional was drawn to global stories about MRSA infections, germs and related absenteeism of students and staff and developed the industry's first program of infection control that reconstructs the outdated use of traditional, at-hand wipes into a sweeping plan to combat classroom germs and bacteria. The turnkey infection control procedures packaged by Simmons' company places Armor Healthcare front-and-center in the battle to protect children, faculty and school districts, and to quiet community unease by confirming their school has an infection control protocol in place."

"Infection control is inadequate to illustrate the battle for life over death, when someone contracts a new strain of drug-resistant illness," said Simmons. "Educators need educating, about the spread of bacteria and contamination. From principals to custodians, everyone involved in a school's system needs adequate tools to effectively reduce the risk of infection."

Launch of the educational online store on Armor's web site is anticipated in early September.

About Armor Healthcare

Armor Healthcare's product lines of private label medical gloves and infection control products command a higher profit margin than the typical exam gloves found in the general market today. Armor specializes in high risk, chemotherapy-rated, National Fire Protection Agency-tested medical grade gloves. Armor offers a full range of logistic services for delivery of containers from its overseas manufacturing partners. Services extend beyond the moving of containers to helping distribution partners build their brand and increase their revenue through a range of sales, marketing, training and logistic services.
