

Voxel Wins Chinese Clients With First U.S.-Europe-Asia Hybrid Cloud Offering

Technology outsourcing clients Candis Group and Shinetech select Voxel for cloud computing and content delivery services for greater global reach

For Immediate Release

NEW YORK/EWORLDWIRE/Aug. 6, 2009 --- Today Voxel, the global leader in Internet infrastructure services including managed hosting, content delivery and cloud computing, announced agreements with Beijing-based Candis Group LTD and Shinetech Software Inc. for use of its cloud computing and content delivery network (CDN) services in Asia.

After going live with its first Asian Point of Presence (POP) in Singapore in May 2009, Voxel pursued an Asian client acquisition strategy that first targeted companies that offer services in the technology outsourcing market. Candis Group, which provides IT management and business outsourcing for global companies operating in China, and Shinetech Software, a software development outsourcing provider, fall within this natural audience for Voxel, as both work with U.S. and European clients and can benefit from the global on-demand hybrid cloud, CDN and dedicated hosting services Voxel provides.

"We're excited to be on the forefront of providing global infrastructure and one of the first cloud and CDN providers in Asia," said Zachary Smith, president of Voxel. "With Voxel's network and hosting products in the three major worldwide markets, our customers can dramatically enhance their services and reach while remaining confident that they have a single, highly experienced vendor to call for support."

According to David van Meerendonk, vice president and sales director of CANDIS, the partnership with Voxel as its infrastructure partner will be extremely valuable to bring the company's "gateway to China" products and services to a global audience. CANDIS will immediately leverage dedicated and virtual servers via Voxel's Hosting API, which allows companies to easily access all Voxel hosting offerings via a standards-based API.

Similarly, Shinetech Software's development teams will utilize Voxel's on-demand cloud to host software projects close to China and then migrate the infrastructure to Voxel's European or U.S. nodes as the projects move into production. Shinetech's Chief Technology Officer Frank Zhang believes Voxel's ability to provide a seamless experience to both Shinetech's engineer team and its customers will provide tremendous value.

In May 2009, following its success in the United States and Europe with on-demand computing and delivery products, Voxel launched the Asian node of its VoxCAST CDN and private cloud computing beta in Singapore. The company will launch its cloud service publicly on at least two continents in mid-August.

About Voxel dot Net Inc.

Voxel (<http://www.voxel.net>) delivers high-performance Internet infrastructure that is scalable, fully-supported and cost-effective. From powering the Internet's top video sites, blogs, and high traffic Web sites, to delivering computing resources on-demand for horizontally scalable applications, Voxel offers unparalleled global expertise in hosting infrastructure, managed services, CDN services and cloud computing.

About CANDIS Group LTD

CANDIS (<http://www.candisgroup.com>) delivers full life-cycle IT solutions to worldwide clients while bridging the gap to the local Chinese market. CANDIS is the de-facto choice when multinational corporations want to establish a footprint in China and currently services a range of clients, from Fortune 500 companies to small start-ups. The CANDIS Group's founders have over 40 years of IT and business experience in China.

About Shinetech Software Inc.

Shinetech (<http://www.shinetechchina.com>) is a leading provider of software engineering services in China. The company has over 380 European and American clients, ranging from start-ups to mature organizations, and it has over eight years of experience in offshore software outsourcing through its six development centers in China. Shinetech offers expertise in .NET 2.0/3.0, SharePoint 2003/2007, Microsoft Visual C++, Java/J2EE, PHP, Cold Fusion and mobile development on various platforms.
